

Compressing Wheel (SCCW)

With the SkanCraft compressor wheel, you can achieve **outstanding compaction results** thanks to its rolling and kneading action. The force of the support frame presses onto the ground and compacts it just like using a rolling element. Hollow spaces in the ground are eliminated by the equipment's **rolling and kneading actions** and gaps are reliably closed up which results in a **perfectly compacted soil**.

The SkanCraft compressor wheel is designed to ideally handle all types of soil conditions. It can also handle cohesive or clay-like soils without any problems. This attachment is also designed to work on hillsides and slopes and is extremely efficient in narrow work spaces, for example, pipeline and sewer construction.

In areas where traditional vibrating plates may cause damage due to the vibrations they generate, the SkanCraft compressor wheel is the logical choice to solve this problem.

The compressor wheel requires no additional parts or connecting pieces. It can be mounted on any excavator.

Special Advantages:

- ▶ Outstanding compression performance
- ▶ Suitable for all types of soil conditions
- ▶ No additional hydraulics necessary
- ▶ Low maintenance and wear-resistant

Technical Details:

	SCCW 10	SCCW 20
Excavator weight (kg)	290	1000
Diameter of the drum (mm)	790	1000
Width (mm)	300	300
Excavator size (t)	bis 10	10 - 20
